

Briton Bauerly

📞 563-663-8211 — ✉️ bauerlybriton6@gmail.com — 🔗 linkedin

Summary —

Versatile engineer with deep experience delivering software in embedded C++ vehicle controls, automation robotics, user-facing applications, and scalable backend systems.

Skills

Languages C#, C++, C, Python, Typescript, Java	Networking WebRTC, RTSP, gRPC, WebSockets, mTLS
Backend ASP.NET, Spring, Express, Django, Flask	Protocols LoRa, I2C, SPI, UART, RS232/485, CAN
Cloud AWS, Azure, GCP, Databricks, Terraform	Embedded NXP iMx8, STM32, ESP32, RPi, Arduino
Persistence PostgreSQL, MongoDB, DynamoDb, InfluxDb	Real-Time FreeRTOS, ROS2 w/ linux-rt
Virtualization Proxmox, ESXi, Docker, Kubernetes	Collaboration Agile, Jira, MS Project, GitHub

Experience

First Orion

March 2025 - Present

Software Engineer - Backend & Cloud

St Louis, MO

- Engineered high-performance, **security-critical C++ software** running on bare-metal infrastructure for a tier-1 telecommunications provider
- Led the design and implementation of a **greenfield cloud-native software** project for a new international customer, **scaling to millions of users** with cutting-edge AWS tools

Intramotev Inc

May 2024 - March 2025

Lead Software Engineer - Applications

St Louis, MO

- **Designed, implemented, and managed Intramotev's Applications stack** of server, client, and onboard vehicle controls software.
- **Defined and prioritized features and user stories** for the product roadmap, software releases, and sprint planning while **collaborating closely** with company leadership, stakeholders, and team members.
- Fostered **product quality & consistency** by instating software measures including end-to-end hardware-in-the-loop testing, CI/CD, and robust runtime telemetry.

Intramotev Inc

Jul 2022 - May 2024

Senior Software Engineer

St Louis, MO

Software Architecture & Technology Versatility

- **Architected, developed, and productionized Intramotev's first and current software architecture.** Worked with product stakeholders to **solve cross-cutting problems and further buy-in** of the architecture plan.
- Designed and implemented engineering solutions ranging from electrical boards to embedded vehicle control software, backend servers, and web and mobile applications.
- **Designed and implemented Intramotev's vehicle user control system**, including its user dashboard, manual control interface, route plan creator & dispatcher.
- Created vehicle & software **demos instrumental in securing \$6.5 million** in seed funding, **\$14.5 million** in series A funding, **customer contracts, and letters of intent.**
- Created a **new wireless peripheral control and communications system in C++** with embedded microprocessors & 900 MHz radio transceivers; multi-purpose usage in material dumping and signaling systems.
- Implemented Intramotev's **early vehicle vision safety system**, deploying custom trained neural network object detection models to an embedded vision microprocessor and implementing it into the vehicle architecture.

Intramotev Inc

Dec 2021 - Jul 2022

Software Engineer

St Louis, MO

- Created Intramotev's first **object detection neural network** using transfer learning, semantic segmentation, tensorflow, and a custom rail image dataset.
- Integrated neural networks and sensor hardware in **embedded Linux devices** for live perception demos.
- Integrated autonomous electric vehicle components into a working self-propelled railcar prototype.

Lectro Engineering

Feb 2021 - Dec 2021

Product Design Engineer

St Louis, MO

- Designed and released **new mechanical products** in Lectro's factory automation portfolio including pick-and-place machines, sorters, and conveyance systems.
- Programmed PLCs to control factory automation robots.

True Manufacturing**Dec 2019 - Mar 2020***Robotics and Automation Engineering Co-op**St Louis, MO*

- Developed new hardware and software solutions to inefficiencies in the robotic manufacturing line.
- Wrote improved software to control Kuka and UR robots with C++.
- Modeled mechanical improvements to robot cells and end effectors with SolidWorks after identifying bottlenecks in manufacturing processes and predicting future points of failure.

Iowa State Self-Aware Complex Systems Lab**May 2019 - Dec 2020***Undergraduate AI Researcher**St Louis, MO*

- Researched, developed, and deployed AI/ML python deep learning algorithms for autonomous cars, agricultural robotics, security applications, and medical research.
- Integrated sensor components into an autonomous Toyota Avalon with C++, ROS, and the NVIDIA Drive SDK

Education

Iowa State University**Sept 2016 - Dec 2020***Bachelor of Science in Mechanical Engineering*
